Jon Ross Dean Ingley

1527 Silver Hill Ct., Stone Mountain, GA | (706)-536-3189 | jingley22@gmail.com

Education

BACHELOR OF SCIENCE | THE UNIVERSITY OF GEORGIA |
GRADUATING, MAY 2020 FRANKLIN COLLEGE OF ARTS AND SCIENCES

- GPA: 3.14 out of 4.0
- Major: Computer Science
- Related coursework: Software Engineering(A), System Programming(B+), Web Programming(A), Software Development(B), Data Structures(A-), Database Management (A-), Mobile Software Development (B), Computer Networks (In-Progress).
- Course Towards Korean Language and Literature Minor: Intermediate Korean I (A), Intermediate Korean II (A), Advanced Korean I (B).

Skills & Abilities

CODING LANGUAGES
- Java
- JavaScript

TECHNOLOGIES
- React
- Redux
- RxJs
- Git
- SQL

LEADERSHIP
- As a captain and treasurer of the Men's Club Ultimate Frisbee team from 2018-2020, I've gained a lot of leadership experience. I dealt with creating team goals, planning paths to those goals, providing player feedback, handling conflict, and managing the team's finances.

COMMUNICATION
- Communication is something we all do everyday, but my experience as a captain has fine tuned my ability to communicate as well as to listen. I am constantly communicating with the team via emails, providing feedback, explaining drills at practice, discussing strategy with fellow leadership, and more.

Work Experience

SOFTWARE DEVELOPER INTERN | SABRE CORPORATION | SUMMER OF 2019
- The position was hired for Java development, but I learned, enjoyed and mostly worked with powerful modern frontend web technologies--React, Redux, RxJS-- to develop a new enterprise UI.
  - We used RallyDevTeams to handle assigning user stories, updating progress, and completion.

- Throughout the project, I became very comfortable working with Git through Windows GitBash to interact with the team's BitBucket. I used Git in a capacity that I never have had to before for smaller University projects with 1 or a few people working simultaneously.
    - For every development, I created unit tests with Enzyme and Jest to self check my own code before being submitted to code review by my team.
    - We used TeamCity to handle our build management for continuous integration; after these tests passed, we could merge our changes, and await QA's assessment.
- During the last week of my internship, the team was beginning to work on a new Java REST API. This project was being hosted and developed in the cloud.
    - The API was deployed as Docker images to guarantee uniform behavior on any host during development.
    - I examined the Jenkins pipeline with the team project leader. The project used Jenkins to automate their CI/CD. The pipeline was triggered by changes to the git branch, and would then run through several stages: ex. compile, build docker images, testing, deployment. Those being predefined within a pipeline yaml file.

OFFICE CLERICAL | SNELLING DINING COMMONS | 2017-PRESENT
- Continued responsibilities from entry level position (Student Employee) while adding additional tasks: maintaining employee records, running the cash register and handling sensitive information.
- I also acted as an extension of management from time to time when they're busy: providing direction for student work stations and training new students.

FOOD SERVICES STUDENT EMPLOYEE | SNELLING DINING COMMONS | 2015-2017
- Acquired skills in customer service, teamwork, communication, time management, and multitasking.
    - Rookie of the Month – August 2015
    - Outstanding Customer Service – September 2016
